Dave/Scott
Will you reach out to your contacts to find these data sets?

Subject: Fire Data

Eric,

We've found 3 different online sites (Forest Service, GEOMAC, and NOAA) all showing basically the same thing. There are points showing fire detects from MODIS, GOES, and AVHRR. We haven't found a perimeter layer as of yet. GEOMAC has a polygon layer but it's just a small buffer around the points and not a true perimeter.

We've downloaded the current shapefile and KMZ (Attached) and also found the web mapping services & web feature services. We'll start creating a flex app displaying the web services.

Forest Service: http://activefiremaps.fs.fed.us/conus/viewer.htm
GEOMAC: http://www.geomac.gov/viewer/viewer.shtml
NOAA: http://www.firedetect.noaa.gov/viewer.htm

KMZ:
[attachment "Active Fire Mapping Program.kmz" deleted by Eric Delgado/R6/USEPA/US]

We'll keep looking around for a perimeter layer.

Jeff
